WORK EXPERIENCE

Software Engineer (Hybrid)

June 2025 - Present

Kahf Yazılım A.Ş, Dhaka, Bangladesh

- Working on Kahf Browser, SafeGaze extension and Kahf Kids projects.
- Kahf Browser: Implemented shortcut section with predefined company products, most visited sites, custom favourite sites. Added 4 types of popular search engines, auto complete suggestion. Added social site section of popular social media. Implemented safe search filter for all search engines. Implemented in house ads on new tab. Built kahf browser desktop version. Built kahf AI chat from scratch.
- SafeGaze: Redesigned the UI and made it lucrative. Implemented ads block, youtube ads block mechanism with safe search. Implemented 4 types of image blur filter mechanism, also implemented new image blur model with less time execution. Implemented video blur mechanism for social media and popular sites. Implemented Shorts and Reels blocker with customize option. Fixed several bugs to optimize the extension to run on low end devices. Made it faster than the previous like 3X. Building AI model with more dataset features by using the latest computer vision models to get more accuracy and optimize blur capabilities. Also building a small model using custom dataset to run it on a device.
- Kahf Voice: Built desktop application for different OS and an extension for web version to remove music from audio, video using a custom model.
- Kahf Kids: Optimized home feed api, caching mechanism and pagination. Optimized search api with applying filters from metadata. Previously it took 2-3 seconds, but after optimization it is almost 200ms-300ms. Added monetization api to monitor the system and get alerts. Also added other api's related to the service. Optimized data filtering from youtube video to play proper videos based on categories.
- Updated the CI/CD pipeline of those projects to automate the process.
- Technologies: Python, C++, Javascript, Typescript, Bashscript, Azure, AWS, Teamhub, Docker, Gitlab, Cloudflare.

Software Engineer (Remote)

October 2020 - June 2025

UDPlatforms, Sterling, VA, USA

- Worked on Rakizo project which was a no code/low code application builder platform that allows users with limited or no programming experience to build mobile and web applications intuitively and quickly.
- I was involved with the project from scratch and led a small local team. Worked from scratch on almost all of the micro services that exist in our platform. Solved complex problems with efficient solutions, including CI/CD automation (using GDM template), data persistence, API design, and third-party API integration.
- Implemented code generation service to train, test and generate code using prompt. Implemented custom LLM model to generate code for our platform.
- Implemented Google Cloud Platform services like Cloud Functions, Pub/Sub, and API Gateway.
- Configured load balancing with SSL certificate automation.
- Implemented API specification generation using swagger and OpenAPI in the deployment process of any micro service to configure API gateway automatically.
- Added event exporting mechanism from a service in the release process.
- Added firestore rules to resolve multi tenancy while using firestore for data save, update, delete and retrieve.
- Implemented finance service to make transactions through an online process using Stripe.
- Implemented chat architecture with proper services.
- Implemented DLQ process in our system to process unacknowledged events.
- Strictly followed Agile methodology, Clean coding and best practices, Domain Driven Design, Solid Design Pattern, TDD, Micro Service Architecture. Operations are event based.
- Technologies: Python, Java, Flutter, Javascript, Google Cloud Platform, BitBucket, Docker, Jira.

Jr. Machine Learning Engineer

November 2019 - September 2020

Pridesys IT LTD, Dhaka, Bangladesh

- Worked as ML and Backend Engineer on Large Scale Face Detection and Recognition from CCTV Camera (PrideVision App a flagship product), Custom Object Tracking and Recognition from Video (for the US company Tagflix).
- Designed the overall system of the automatic Attendance System project and led the small team. This project was for the garment sector attendance and monitoring system..
- Added dashboard, user creation, upload dataset to train the model automatically from UI, monitoring working environment using CCTV.
- Trained AI model to detect and recognise person with large local dataset and achieved almost 92% accuracy. Also added spoofing detection mechanism.
- Trained AI model to detect any custom object and track any object by specifying the user from any video or live streaming. Fixed some features in BE and FE to optimize the system to be fast.
- Deployed application in inhouse server by automating the ci/cd process.
- Used Azure cloud to create data pipeline and automate the data storing process,
- Technologies: Python, Javascripts, Flask, Django, Tensorflow, Keras, Dlib, OpenPose, Pandas, Numpy, OpenCv, Scikit-learn, Redis, MySQL, Azure, Docker, Testing Hardware – Jetson TX2.
- Demo Link: <https://drive.google.com/file/d/1rY3BwFtYLEJDSdApJTaw0HSivjJdKY2i/view>

Jr. Software Engineer

July 2019 - November 2019

Think-Bricks LLC, Dhaka, Bangladesh

- Worked as AI and Full Stack Engineer on Smart Retina web-app and AI tool of Diabetic Retinopathy Detection and successfully launched it at BNSB Eye Hospital.
- Made a portal site for doctors, patients and providers of hospitals for better communication process.
- Created datastore pipeline using S3 bucket and dynamoDB and integrated with service.
- Used EC2 instance to deploy our service using ci/cd automation process.
- Added some features in the android support application to improve user accessibility.
- Trained a model with different dataset and local dataset to achieve accuracy more than 90%. Tested that model at eye hospital to verify with local patient retinal images.
- Used autoML and sagemaker of AWS to train, test and deploy AI models.
- Our team won the 1st prize in ICT covid-19 Call for Nation-20, health category.
- Technologies: Python, Javascripts, Java, Flask, Django, Tensorflow, Keras, Pandas, Numpy, OpenCv, Scikit-learn, AWS, Docker.
- Demo Link: <https://youtu.be/tQ8fvMqDhek>

EDUCATION

Bachelor of Science in Computer Science & Engineering

June 2015 - July 2019

Ahsanullah University of Science and Technology, Dhaka, Bangladesh

CGPA: 2.91 / 4.00

Focused on software and programming, with courses like Algorithms, Data Structures, AI, Pattern Recognition, Distributed Database, Operating System, Web Programming and Compiler Design.

RESEARCH

My research topics are “Driver face and drowsiness detection in real-time”, “Diabetic retinopathy detection from fundus retinal image”, “Human Quantum Computing and interaction”. I have published three articles at renowned journals and conferences.

Publications —

1. **Anis-UI-Islam Rafid**, Amit Raha Niloy, Atiquel Islam Chowdhury, Nusrat Sharmin, "A Brief Review on Different Driver's Drowsiness Detection Techniques", International Journal of Image, Graphics and Signal Processing(IJIGSP), Vol.12, No.3, pp. 41-50, 2020.DOI: 10.5815/ijigsp.2020.03.05.
2. **Anis-UI-Islam Rafid**, Amit Raha Niloy, Atiquel Islam Chowdhury, Nusrat Sharmin, "A Deep Learning Based Approach for real-time Driver Drowsiness Detection". 2021 5th International Conference on Electrical Engineering and Information &

Communication Technology (ICEEICT), 2021, pp. 1-5, doi: 10.1109/ICEEICT53905.2021.9667944.

3. **Anis-UI-Islam Rafid**, Sylvia Priata, Nusrat Sharmin, "An Early Stage Diagnosis of Diabetic Retinopathy Based on Ensemble Framework", SIVIP (2023), <https://doi.org/10.1007/s11760-023-02796-5>.

TECHNICAL SKILL

- **Programming Languages:** Python, Java, JavaScript, Typescript, Flutter.
- **Frameworks:** Flask, Django, FastApi, Streamlit, Miconaut, Vue JS, Electron JS.
- **Databases:** MySQL, SQL, NoSQL, Oracle.
- **Operating System:** Windows, Ubuntu, MacOS.
- **Cloud Platform:** AWS, Azure, Google Cloud.
- **AI Tools:** Ollama, Claude, Gemini, Deepseek, Z.ai, Coder, Vibe Canban, and many others.
- **Others:** Git, Docker, Bash Script, Hue, Hive, Impala, Postman, Jira, BitBucket.

HONOR & AWARD

- 1st runner-up in the Software category of AUST INNOVENTURE 2017.
- 2nd runner-up in Software Category of AUST MindSparks 2019.
- People's Choice Award Winner of DIU Hackathon 2017.
- 3rd Position of BUET Hackathon 2018.
- Participated in IUT Hackathon 2017, the Idea and Innovation Competition of AUST MindSparks 2019, EWU Apps War 2016.

PROJECT

1. Deep Object Search with Hash — It is an object search mechanism with hashing techniques using deep features of available pre-trained object detection models. With the help of another contributor we made it as an open-source project and my first work as an open-source contributor. Link : <https://github.com/munnafaisal/Deep-Object-Search-With-Hash>

2. Halt Violence Against Women — Detects abnormal behavior of victims in real-time by analyzing emotion and body motion and then gives an alarm. Frameworks: Keras. Toolkits: numpy, winsound, opencv.

3. Predict Economic status and Restaurant — Find out the economic status of the customer and the place of the restaurant where he/she goes depends on some specific attributes. Tools: pandas, numpy, matplotlib, KNN-Classifer, sklearn metrics.

EXTRA-CURRICULAR ACTIVITY

Python Programming Language Instructor

December 2024 - Present

HDNB, Dhaka, Bangladesh

- I have joined Human Development Network Bangladesh (HDNB) as an esteemed instructor for the Python Programming Language Bootcamp_10B1. Link: <https://www.hdnb.net/bootcamp/python/?by=97990580>

Programming Instructor

April 2022 - July 2022

Epyllion Group, Tejgaon, Dhaka, Bangladesh

- Worked as a Python Programming Language instructor for KHEA academy. It is an online learning platform where numbers of students, professionals, and experts join from different corners of the country. The platform is providing free courses for all.

IT secretary, National Ideal College Alumni Association (NICAA)

February 2020 - Present
